ESSENTIAL REQUIREMENTS

- Medical degree (Doctor).
- Minimum of two years professional experience as a doctor of intensive care unit
- Accredited experience as trainer or teacher of intensive care services in community bases primary care models.
- Accredited experience in attending critical COVID 19 patients
- Excellent oral and written English. Arabic is an asset

- The medical advisor for ICU management and training, should have expertise and founded medical practice in both directly attending and training other professionals in the attendance of critically ill patients, with proven experience in attending COVID 19 critically ill patients, with expertise in the following critical events:
 - ❖ heart and cardiovascular failure – ALS operation
 - ❖ renal (kidney) failure
 - ❖ liver failure
 - ❖ patients with reduced levels of consciousness or neurological impairment (including weakness)
 - ❖ gastrointestinal failure
 - ❖ respiratory failure and respiratory assistance
 - ❖ sepsis – a serious immune system reaction triggered by infection

- The medical advisor has to have proven experience in assessment, monitoring and review of patients with or at risk of developing critical illness and the provision of organ system support, including:
 - ❖ use of inotropes and vasopressors
 - ❖ mechanical ventilation – using a machine known as a ventilator to assist breathing
 - ❖ invasive monitoring, including arterial cannulation where a tube known as a cannula is inserted into a blood vessel, usually for the delivery or removal of fluids
 - ❖ endotracheal intubation – a flexible tube is inserted through the nose or mouth into the trachea for artificial ventilation or for the administration of gases during anaesthesia
 - ❖ percutaneous dilatational tracheostomy – a minimally invasive procedure where the trachea (wind-pipe) is opened from the front of the neck to enable air to be passed into the lower air passages
 - ❖ measurement of cardiac (heart) output
 - ❖ renal (kidney) support using haemodialysis or hemofiltration (techniques used to ‘purify’ the blood of patients with kidney failure)
